

WIDE-ANGLE CONSTANT-VELOCITY JOINT, WITH ARRANGEMENT
FOR REDUCING THE STRESSES OF THE INTERNAL MEMBERS

ABSTRACT

5 The joint comprises two spiders (10, 14) and a central core forming
a cavity for sliding movement in a transverse plane for two constraint
members (120) with seats (120A) for the spherical heads (10B; 14B) on the
ends of the two forks (10, 14); a divider (150) divides said cavity into two
 housings (124) for the two constraint members (120).
